

PHILIPPINE BIDDING DOCUMENTS

(As Harmonized with Development Partners)

Procurement of GOODS

Government of the Republic of the Philippines

**Fifth Edition
August 2016**

Preface

These Philippine Bidding Documents (PBDs) for the procurement of Goods through Competitive Bidding have been prepared by the Government of the Philippines (GOP) for use by all branches, agencies, departments, bureaus, offices, or instrumentalities of the government, including government-owned and/or -controlled corporations (GOCCs), government financial institutions (GFIs), state universities and colleges (SUCs), and local government units (LGUs) and autonomous regional government. The procedures and practices presented in this document have been developed through broad experience, and are for mandatory¹ use in projects that are financed in whole or in part by the GOP or any foreign government/foreign or international financing institution in accordance with the provisions of the 2016 Revised Implementing Rules and Regulations (IRR) of Republic Act (RA) 9184.

The Bidding Documents shall clearly and adequately define, among others: (a) the objectives, scope, and expected outputs and/or results of the proposed contract; (b) the eligibility requirements of bidders, such as track record to be determined by the Head of the Procuring Entity; (c) the expected contract duration, the estimated quantity in the case of procurement of goods, delivery schedule and/or time frame; and (d) the obligations, duties, and/or functions of the winning bidder.

In order to simplify the preparation of the Bidding Documents for each procurement, the PBDs groups the provisions that are intended to be used unchanged in Section II. Instructions to Bidders (ITB) and in Section IV. General Conditions of Contract (GCC). Data and provisions specific to each procurement and contract should be included in Section III. Bid Data Sheet (BDS); Section V. Special Conditions of Contract (SCC); Section VI. Schedule of Requirements; Section VII. Technical Specifications, and Section IX. Foreign-Assisted Projects. The forms to be used are provided in

Section VIII. Bidding Forms.

Care should be taken to check the relevance of the provisions of the PBDs against the requirements of the specific Goods to be procured. In addition, each section is prepared with notes intended only as information for the Procuring Entity or the person drafting the Bidding Documents. They shall not be included in the final documents, except for the notes introducing

Section VIII. Bidding Forms where the information is useful for the Bidder. The following general directions should be observed when using the documents:

- (a) All the documents listed in the Table of Contents are normally required for the procurement of Goods. However, they should be adapted as necessary to the circumstances of the particular Project.

¹ Unless the Treaty or International or Executive Agreement expressly provides use of foreign government/foreign or international financing institution procurement guidelines.

DISTRIBUTION TRANSFORMERS

➤ Scope:

LIBRETH Z. LARIOS
BAC-VICE-CHAIRMAN

All distribution transformers must be compliant on the specified manufacturer standard pre-ordered basis in term of standard transformer loss specified. Windings are specified copper to copper.

➤ General Guidelines:

All participating bidders should submit the following data:

1. Transformer Standard Losses.
2. Certificate of accredited manufacturer's distributor.
3. DENR Compliance on PCB clearance type of oil use.
4. Manufacturer manual on technical specification.
5. Warranty certificate not less than 2-yrs.
6. Complete test result of each rating.

B. TECHNICAL SPECIFICATION:

This specification covers the electrical, mechanical and performance requirements for a single phase, mineral oil filled and overhead type distribution transformer for use on 7,620/13,200 – Volts, 60 HZ. Y-grounded, 120/240 volts secondary, with externally operated tap changer Coop distribution system. Distribution transformer furnish shall conform in all respect to the requirements of this document. The transformer will be suitable used in a hot tropical climate with high humidity and high annual rain fall. All units offered by the bidder's must be brand new; re-condition not accepted all transformers' material core is made of high grade silicone metal.

SHILA ROSEL DE LA PENNA
BAC-MEMBER

C. TRANSFORMER TYPES:

CONVENTIONAL: A pole mounted transformer with two primary bushings is sometimes referred to as "conventional". It can be used individually to provide single-phase power or it can be banked with two like transformers to provide three-phase power.

Amorphous metal transformer (AMT): Is a type of energy efficient transformer found on electric grids. The magnetic core of this transformer is made with a ferromagnetic amorphous metal. The typical material (Metglas) is an alloy of iron with boron, silicon, and phosphorus in the form of thin (e.g. 25 µm) foils. These materials have high magnetic susceptibility, very low coercivity and high electrical resistance. The high resistance and thin foils lead to low losses by eddy currents when subjected to alternating magnetic fields.

RONALD D. ALOYAN
BAC-CHAIRMAN

On the downside amorphous alloys have a lower saturation induction and often a higher **magnetostriction** compared to conventional crystalline iron-silicon electrical steel.

This specification covers the requirements with copper to copper winding from high voltage to low voltage. All technical productive devices will be provided by the suppliers.

LIBETH Z. LARIOSA
BAC-VICE-CHAIRMAN
